

Linux Commands Cheat Sheet

Example	Description
<code>pwd</code>	Show current directory
<code>ls -la</code>	List all files with details
<code>cd /var/log</code>	Change directory
<code>mkdir project</code>	Create directory
<code>rmdir test</code>	Remove empty directory
<code>touch app.txt</code>	Create empty file
<code>cp file.txt /tmp/</code>	Copy file
<code>mv old.txt new.txt</code>	Move or rename file
<code>rm -rf temp/</code>	Remove files/directories
<code>find / -name nginx.conf</code>	Search for file
<code>locate docker-compose.yml</code>	Quickly locate file
<code>tree /etc</code>	Show directory structure
<code>stat app.log</code>	Show file details
<code>cat file.txt</code>	Display file content
<code>less /var/log/syslog</code>	View large file
<code>head -10 file.txt</code>	Show first 10 lines
<code>tail -f app.log</code>	Monitor file logs live
<code>nl script.sh</code>	Show file with line numbers
<code>grep "error" app.log</code>	Search text pattern
<code>`egrep "fail</code>	error" log.txt`

<code>awk '{print \$1}' file.txt</code>	Print first column
<code>sed 's/dev/prod/g' file.txt</code>	Replace text
<code>cut -d":" -f1 /etc/passwd</code>	Extract text column
<code>sort names.txt</code>	Sort lines
<code>uniq users.txt</code>	Remove duplicates
<code>wc -l file.txt</code>	Count lines
<code>echo hello tr a-z A-Z</code>	Convert lowercase to uppercase
<code>chmod 755 script.sh</code>	Change permissions
<code>chown ubuntu:ubuntu app.txt</code>	Change ownership
<code>umask 022</code>	Set default permissions
<code>whoami</code>	Show current user
<code>id ubuntu</code>	Show user and group IDs
<code>sudo useradd devops</code>	Create user
<code>passwd devops</code>	Change password
<code>usermod -aG docker ubuntu</code>	Add user to group
<code>groupadd admins</code>	Create group
<code>uname -a</code>	Show system information
<code>hostname</code>	Show hostname
<code>uptime</code>	Show system uptime
<code>date</code>	Show date and time
<code>cal</code>	Show calendar
<code>ps aux</code>	Show running processes

<code>top</code>	Live process monitoring
<code>htop</code>	Interactive process viewer
<code>kill -9 1234</code>	Kill process by PID
<code>pkill nginx</code>	Kill process by name
<code>jobs</code>	Show background jobs
<code>bg %1</code>	Run job in background
<code>fg %1</code>	Bring job to foreground
<code>df -h</code>	Show disk usage
<code>du -sh /var/log</code>	Show folder size
<code>lsblk</code>	List block devices
<code>mount /dev/sdb1 /mnt</code>	Mount filesystem
<code>umount /mnt</code>	Unmount filesystem
<code>ip a</code>	Show IP addresses
<code>ping google.com</code>	Test connectivity
<code>curl https://example.com</code>	Fetch URL content
<code>wget file.zip</code>	Download file
<code>netstat -tulnp</code>	Show network connections
<code>ss -tulnp</code>	Show socket statistics
<code>nslookup google.com</code>	DNS lookup
<code>dig openai.com</code>	Detailed DNS info
<code>traceroute google.com</code>	Trace network path
<code>scp file.txt user@host:/tmp</code>	Copy file remotely
<code>ssh ubuntu@server-ip</code>	Remote login

<code>sudo apt update</code>	Update package index
<code>sudo apt upgrade</code>	Upgrade packages
<code>sudo apt install nginx</code>	Install package
<code>sudo apt remove nginx</code>	Remove package
<code>systemctl status nginx</code>	Check service status
<code>sudo systemctl start nginx</code>	Start service
<code>sudo systemctl stop nginx</code>	Stop service
<code>sudo systemctl restart nginx</code>	Restart service
<code>sudo systemctl enable docker</code>	Enable service at boot
<code>journalctl -u nginx</code>	View service logs
<code>dmesg tail</code>	View recent kernel logs
<code>tar -cvf backup.tar dir/</code>	Create tar archive
<code>gzip file.txt</code>	Compress file
<code>gunzip file.txt.gz</code>	Decompress file
<code>zip app.zip file.txt</code>	Create zip archive
<code>unzip app.zip</code>	Extract zip archive
<code>crontab -e</code>	Edit cron jobs
<code>at 10:00 PM</code>	Schedule one-time task
<code>export ENV=prod</code>	Set environment variable
<code>env</code>	Show environment variables
<code>printenv PATH</code>	Print variable value
<code>git clone repo-url</code>	Clone Git repository

<code>git status</code>	Show Git status
<code>git add .</code>	Stage changes
<code>git commit -m "update"</code>	Commit changes
<code>git push origin main</code>	Push changes
<code>git pull origin main</code>	Pull latest changes
<code>docker ps</code>	List running containers
<code>docker images</code>	List Docker images
<code>docker build -t app .</code>	Build Docker image
<code>docker run -d nginx</code>	Run container
<code>docker exec -it cont bash</code>	Access container shell
<code>docker logs cont</code>	View container logs
<code>kubectl get pods -A</code>	List all Kubernetes pods
<code>kubectl describe pod nginx</code>	Show pod details
<code>kubectl logs nginx</code>	View pod logs
<code>kubectl exec -it nginx -- bash</code>	Access pod shell
<code>terraform init</code>	Initialize Terraform
<code>terraform plan</code>	Show infrastructure plan
<code>terraform apply</code>	Apply infrastructure changes
<code>terraform destroy</code>	Destroy infrastructure
<code>java -jar jenkins.war</code>	Start Jenkins manually
<code>mvn clean install</code>	Build Maven project
<code>ssh-keygen -t rsa</code>	Generate SSH key
<code>ssh-copy-id user@server</code>	Copy SSH key to server
